

Simulate any Aquilon series multi-screen presentation system on your PC or Mac

LivePremier™ Simulator

Create your configuration offline

AW LivePremier™ Simulator allows you to simulate any Aquilon series multi-screen presentation system on your PC or your Mac. You can launch the integrated Web-based graphic user interface (Web RCS), interact with the virtual(s) device(s) to design and prepare a show on the road as you would do with a real device or linked devices. You can then export the show to a USB drive and import it straight into your **Aquilon** image processor.

AW LivePremier™ Simulator at a glance

- ▶ Simulate any **Aquilon** series multi-screen presentation system in standalone or link mode (up to 4 linked devices), from Aquilon RS alpha to Aquilon CMax (no 'real' device needed)
- ▶ Easily select and configure the device you want to simulate using the configurator included
- ▶ Use the integrated **Web RCS** for self-training or to start working on a customer configuration offline
- ▶ Save your work at the end of simulation session and seamlessly resume it the next time
- ▶ Export the show you have prepared with **AW LivePremier™ Simulator** and import it straight into your **Aquilon**
- ▶ Test the REST API, the Crestron driver, the RC400T controller as well as 3rd party controllers

Other tools also available on www.analogway.com

- ▶ **AW VideoCompositor for LivePremier™**: Application to design intuitive drag and drop Crestron® user interfaces to control your live events with the LivePremier™ series live presentation switchers
- ▶ **AW EDID Editor**: Solution to create and edit EDID files for an optimal compatibility between your sources and displays
- ▶ **AW Screen Frame Cutter**: Tool to split any wide-screen image into multiple still backgrounds for your multi-projector Soft Edge Blending or for your Custom Canvas screen setup

Installation steps

- Download **AW LivePremier™ Simulator** from the Analog Way website and install it on your computer
- Launch the **AW LivePremier™ Simulator** then click **Create new session** to create a new simulation session
- Rename the session you have just created so you can easily find it next time and resume it
- Select and configure the type(s) of **Aquilon(s)** you want to simulate. For Aquilon C, Aquilon C+ and CMax, you can also configure the exact number and type of I/O as well as the number of VPU and IPU
- Select the corresponding firmware you want to use
- Click **Save** then click **Start Session** to start the simulation session
- Click the **Open WebRCS** button to open the integrated **Web RCS**
